## **Schwannoma Of The Liver Presented As A Cystic Liver Tumor.**

**Setthabutr EAUPANITCHAROEN\****Surgery, Maharat Nakhon Ratchasima Hospital, THAILAND*

**Background :** A 51-year-old woman had abdominal discomfort for 3 months and a palpable mass in the right upper quadrant. The CT scan and MRI of the upper abdomen revealed a cystic tumor in the right lobe of the liver, measuring 18.6 cm in size. The preoperative diagnosis was IPN-B. She underwent right hepatectomy, and the pathology report showed a Schwannoma measuring 17x5x5 cm.

**Methods :** Review of medical records and video of the operation.

**Results :** The patient recover uneventfully and discharged on the 8th postoperative day.

**Conclusions :** Schwannoma presented as a cystic tumor mimic IPN-B.
